Job market situation: various parameters that characterize various job market segments

gsz.gov.by
0.1 unemployed per
opening

rabota.tut.by: 6.5
resumes per
opening

- » By covering various segments of the Belarusian job market, the public and private job portals together provide anyone with access to information and services for efficient employment .

Prospects for using job and resume big data.

A unified job analytics portal

Challenges:

- Different job and resume information structuring criteria
- Different ways of presenting data on jobs and resume content
- Lack of detail in describing required skills
- Uneven representation of jobs and resumes across regions and occupations – the representativeness issue

Online portal ranking – the ETF methodology

1. Rough position in the Google ranking:
2. Type of job portal
3. Type of operator
4. OJV volume (approximate number of OJV)
5. Geographical scope
6. Sectoral scope
7. Publication date of OJV
8. Update frequency
9. Language
10. Occupation
11. of operator
12. Working time
13. Sector
14. City
15. District
16. Region
17. Qualification level
18. Wage

RESULTS OF RANKING 19 ONLINE PORTALS IN BELARUS, 2019

26

- » Many nations have unified Web portals, platforms or online services in various forms. These are supervised by either the public employment agencies (Germany, Canada) or national educational institutions (Czech Republic, Austria, Denmark, Great Britain, Estonia, Finland, the Netherlands).
- » Russia has similar best practice, e.g. in Karelia, where this is implemented as an open portal.
- » Belarus has elements of this system: the public employment service website providing information about registered vacancies, human resources portals primarily providing current analysis, and the websites of some education institutions offering career guidance services, etc. Starting in 2020, there are plans to introduce a new version of the PES Portal, as well as develop and introduce the unified search and reference subsystem of the Corporate Information System for Social and Labor Management (Management CIS), one source of reference for the PES Portal and the Public Employment Automated Management System.
- » A comprehensive and open prediction of future in-demand competences, skills, and concise and self-explanatory overviews of the state of various job market segments (industries, regions, occupations) all require one platform and one organization.

JOB ANALYSIS

In view of the fact that a number of portals duplicate one another's information, and in light of a need for providing access to their data, three steps are necessary:

- » 1. define a list of required public portals to provide information for prediction and analytics
- » 2. enter into agreements with the owners of private portals on information use and uniform classification
- » 3. supplement the portals' content with visual, interactive analytics results

RESUME ANALYSIS

- » Applicant resumes (descriptions of skills and qualifications) must be structured in the same manner as the job descriptions (inside the job posting), using a unified format, e.g. EuroPass.
- » Both the job description and resume description must have consistent lists of competences and skills, which can be combined into various qualifications, so that the system can automatically match these by keywords and align.

JOB ANALYSIS

In view of the fact that a number of portals duplicate one another's information, and in light of a need for providing access to their data, three steps are necessary:

- » 1. define a list of required public portals to provide information for prediction and analytics
- » 2. enter into agreements with the owners of private portals on information use and uniform classification
- » 3. supplement the portals' content with visual, interactive analytics results

Job analysis specifies the following:

1. title and occupation
2. industry
3. certificates (diplomas) and education requirements
4. experience
5. level of compensation
6. competences and skills – entered uniformly. An agreement is required on entering these in accordance with one classifier. This would provide an insight into the grouping or splitting of skills within a job.
