Module 1: Technical training

Session 5
Access to the database, data model and key features - Practical guidance

Speaker: Mauro Pelucchi
09/11/2022
Data production system

**Tunisia (04/2020 to 07/2022)**
- 680,191 OJVs - > 175,203 deduplicated

**Ukraine general (04/2020 to 07/2022)**
- 2,571,655 OJVs - > 1,304,262 deduplicated

**Georgia (04/2021-07/2022)**
- 129,271 OJVs - 84,817 deduplicated

**Egypt (new)**
- 1,307,678 OJVs – 391,701 deduplicated

**Kenya (new)**
- (collection started in september 2022)
Collecting and decoding labor market data

Real-time job market data offer up-to-date insights not possible through traditional sources

Capture job market data

Tagging and structuring

A common language

Drawing conclusions

Data ontology allows for comparisons

Insight from in-demand skills and real-life career patterns
Overall Data Flow

Data Ingestion

Pre-Processing

Information Extraction

ETL

Presentation Area
Data Ingestion

- **Goal:**
  - Collect massive amount of heterogeneous data from several unpredictable number of sources

- **Challenges:**
  - Guarantee data completeness and consistency

- **Approach**
  - Develop a multi-technique framework (crawling, scraping, API) to fit different website characteristics: volume of vacancies, different languages, technology structure, non-invasive approach and policy agreements
  - Prevent data sources losses, via redundancy policies
  - Detect and collect metadata to improve information value

- **Features:**
  - To grant process governance in data Ingestion phase, we developed a monitoring system with a scheduling tool and an alerting module
Data Pre-Processing

• **Goal**
  • Feed information extraction phase with proper data

• **Challenges**
  • Measure, monitor and increase Data Quality, to maximize completeness, consistency, complexity, timeliness and periodicity

• **Approach**
  • Develop a multi-phase pipeline, focused on:
    • Vacancy Detection: analyze website page to select only content referred to vacancies
    • Deduplication: detect duplicated vacancy posts to obtain a single vacancy entity
    • Date detection: identify release and expire dates through vacancy description analysis
    • Vacancy duration: method to define expire date, when not explicitly available

• **Features**
  • Guarantee Data Quality during all processing phases
Data Classification

- **Goal:**
  - Extract and structure information from data, to be provided to the presentation layer

- **Challenges:**
  - Handle massive amount of heterogeneous data written in different languages

- **Approach:**
  - Develop an adaptable framework, language dependent, tailored on different information features. Some relevant challenges:
    - Occupation feature classification: combined methods such as Machine Learning, Topic Modeling and Unsupervised Learning
    - Skill feature classification: another different combined methods, such as Text Analysis with corpus based or Knowledge based similarity

- **Features:**
  - Guarantee Explainable information extraction, logging classification methods and relevant features.
Presentation Area

- Data Discovery Capabilities
- Embedded Advanced Analytics
- Spatial location intelligence
- Publish, Share and Collaborate
- Visual-Based Investigation
- Graph Discovery and investigation
- Self-service analytics and BI
- Systems of Insight
- Data storytelling
Identify users and navigation patterns

Oracle Technician

In this role you will be responsible for these activities:

- Install and support the server operating system, system management software and operating system utilities
- Manage the operating system configuration
- Manage file systems and print queues
- Monitor and maintain operating system log files
- Recommend operating system updates and configuration modifications …

Classification value:

2522 - Systems administrators
Are you an experienced Administrator, seeking your next contract in the Bristol area? My client is a large property maintenance specialist with an immediate opportunity for a Branch Administrator to join the team on an initial interim basis. The successful candidate will complete a range of administration tasks, including answering incoming calls, liaising with contractors and raising invoices.

Responsibilities:
• Use the I.T systems to provide an administration service in the preparation, processing and selection of estimates, bids and tenders
• Ordering of goods, materials and services to enable the requirements of contracts are met
• Deal with internal and external communications and record and or report information as necessary
• Ensure all necessary contract data, documentation and reports are accurate and produced on time
• Support Management in meeting the business needs.
• Deal with Client / Customer queries and or communications professionally and efficiently.

Requirements:
• Confident IT skills, proficient in the use of MS Office
• Excellent communication skills both written and verbal
• Must be an excellent organiser with proven time management skills
• ...
Dataset
Dataset – Model & Datastore

Keywords

• Denormalized tables
• Columnar Store
Dataset Model

FT Document

1 Row for each:
- General_ID
- Key
- OJV
- Source
- Place

Why? Because, for each OJV, we can detect a multi-place Vacancy
e.g. «Software Developer in London / Liverpool»

FT Skill Analysis

1 Row for each:
- General_ID
- Key
- OJV
- Source
- Place
- Skill

Why? Because, for each OJV, we can obviously detect multiple skills
e.g. «Software Developer in London / Liverpool, with customer orientation culture, that speaks english and tolerates stress»
Dataset Model

So, to have the number of job vacancies you always have to compute an unique count by General_ID
